WINTER MESSAGE ON HOLD:

Did you know that most vehicles only have one belt under the hood driving multiple components including your alternator, water pump, power steering, emission pumps and more? Can you imagine the problems you'll have if that belt breaks? Consult your owner's manual or ask one of our parts professional how often this belt should be replaced. Even if it has a little life left in it, put on a new one and put the old one in the trunk as a spare. Thanks for calling, we'll be with you in a moment.

We know your time is precious, that's why we employ ASE certified parts professionals who work harder and smarter. Along with our huge selection of parts and accessories, we have the tools and the advice to help you get the job done right – the first time! Some say this level of expertise is unnecessary, we don't think so – in fact we're proud of it! Thanks for being patient, we'll be with you in just a moment.

Your battery is the heart of your vehicle and needs to be checked frequently. Like any rechargeable battery, it won't last forever, especially with the incredible amount of electrical options on today's vehicles. Plus, the colder the weather, the less cranking power available to start your vehicle. We're happy to test your battery – free of charge – and make replacement suggestions, if necessary. Our goal is to keep you safe and sound on those frigid winter days! Thanks for calling Auto Value, we'll be with you in a moment.

Auto Value parts professionals know you depend on your vehicle to help keep your life in order. That's why we carry more name brand parts – and back them with a nationwide warranty. We also have more resources for those unique or hard-to-find parts and accessories. We pride ourselves on being a one-stop shop for all your needs. Heck, we even have parts for snowmobiles, ATVs and garden tractors! Sorry for the wait – help is right around the corner.

A well-tuned vehicle not only saves you money, it's also much better for the environment. Regardless of today's fuel prices, we can offer some good advice to help make your vehicle more fuel efficient – and more environmentally friendly – saving you money in the long run. Or, we can recommend a good service center who'll give your vehicle a 21st century tune-up featuring downloads to your vehicle's computers to help make it run better. Think about it: you upgrade the software in your home computer, vehicle computers are no different! Thanks for holding, we'll be with you in a moment.
